

ReSound Aventa® 3

Intuitive and truly wireless fitting

ReSound

rediscover hearing

ReSound Aventa® 3

Wireless fitting

ReSound Aventa® 3 introduces the first truly wireless fitting. There are no uncomfortable cables or any intermediate devices for your clients to wear – just a professional, comfortable fitting experience.

- ReSound Airlink™ uses a strong and direct 2.4 GHz wireless connection with a stable communication link to the hearing instrument at a distance of minimum 3 meters. It plugs into your PC's USB slot connecting your computer directly with the hearing instruments worn by your client.
- The truly wireless solution means your clients can easily test hearing instrument settings by walking around the office or out on the street. When they return to the fitting room, you reconnect with a simple click in ReSound Aventa® 3.
- All ReSound® models with wireless capabilities can be fitted using ReSound Airlink™.
